Hi Ryan:

Here is an e-mail response from MaryAnne Lowndes attaching the state road map because I had explained to her over the phone that EPA would be conducting Geoprobe sampling in the Central Sands Area . I had asked her if there were any state requirements or permits I need to obtain prior going out and drilling holes. I had also explained over the phone the Groundwater Sampling Project.

Sincerely,

Cheryl Burdett

Mary

Cheryl,

Here is a map and information for state run highways. Hopefully this gives you what you need. At least you will know who to talk to.

I also spoke with Aaron. He has a call scheduled with Matt Ruark on Monday to talk about potatoes and petiole testing. He is also going to look back at the previous submittals to see if they even submitted any test results. He is going to ask Matt if the recommendation of allowing an additional 50 lbs is a one time thing or if it is recommended any time the test shows that more is needed. Then we have to decide if we are comfortable with that from an environmental perspective depending on his answer.

I also asked Aaron about your question related to how many years they have to draw down P if the soil test shows it is over 100. Essentially, once the test shows it is over, they need to continue the application rates for

draw down until a soil test shows it is below again. So if they do testing according to the permit every four years, then it would be 4 years. But they could go test the soil at any time if they thought the drawdown was effective.

Hope this helps. I did mention that EPA was focusing in the Central Sands Dairy area with concerns for the high nitrate levels to Brian Weigel, my supervisor.

Hi Mary Anne:

I just left you a voice-mail and heard that you are in meeting most of the day...bummer...

Bob talked with me yesterday regarding your note. I manage our on right-of-way permit programs for WisDOT.

If you are looking for state trunk highway (STH) maps, please visit this [webpage](#). A list of STH maps by each county is detailed at the bottom. STHs include interstates, US routes and Wisconsin routes.

A map showing all state trunk highways is attached.

Be advised that there are connecting highways as well. These are US and WIS routes that are signed, but not maintained by WisDOT. They are maintained by local municipalities and by state law, they are also the permitting authority. A list of connecting highways by municipality is available at this [webpage](#).

Please let me know how we can help with permitting on our STHs. Thanks. >>Bob

Hi Bob,

I have been contacted by WDNR to provide some info for an EPA request. I spoke with Ned Grady to see if there is a map available that shows STH, US, and interstate highways. I am wondering if you would be the person that would coordinate any work within the ROW. I am in a meeting most of tomorrow at Truax.

Thanks,

Subject: RE: Map of DOT roads

I don't think they want to be too specific. If I narrowed it to a few counties would that be helpful?

Willing to help. Would it be easier if you forwarded the discussion to me?
I will find out and provide what we have.

Subject: Map of DOT roads
Importance: High

Bob,

Someone at EPA asked me about what permissions are needed if they want to do work in a DOT ROW. They don't yet know if the locations they would be interested in are actually DOT roads. Do you have an electronic map that shows all of the roads DOT controls that would need a permit for work in the ROW? They are trying to get this set up this week (i.e. pick the locations) and I was trying to help them identify the roads. Let me know if there is something you can share.

Thanks,

Mary Anne
